

AVANCE *Biotechnologies, Chile*

3Taex^(PA)

**Sealing fungicide.
Pruning paint.
Triple protection.**

Characteristics

3Taex, Triple Activated Trichoderma in Latex, is a fungicide designed to seal pruning wounds and provides triple protection through:

- A mechanical barrier (sanitary seal),
- An immediate contact barrier, active biofungicide
- An active biological barrier (3TAc, Triple Activated Trichoderma) that colonizes the wound (protects even when latex break-ups occur or when there is careless application).

Direct action against opportunistic fungi attacks, responsible for the appearance of *Chondrostereum purpureum*, grape leaf roll (mycoplasma), and other wood mycosis.

Suitable for protection and sealing of pruning cuts and grafting in trees (forest, fruit and ornamental), vines and woody plants.

Due to its organic formulation, 3Taex is free of phytotoxic elements and has no restrictions on its use.

One gallon of paint ready for use.
Yields 14m² per liter.
